2nd client meeting notes :

TODO:

- Get deeper in dataset inspection. Focus on understanding **content** (not just structure) and determine which datasets are in/out of scope for our standardization assignment
- Confirm whether the Tech Data dataset (the one missing column headers) can be interpreted or has a reference with other datasets. (Fritz said that it is a usable dataset by itself, the point is whether we need it or not)
- Also confirm whether duplicate data in TU sub-folders are duplicated, and if so, exclude it from the scope
- Update IST & SOL PIM workflow diagram according to Fritz's clarification of the actual current process and clearly note the bottlenecks
- update the Moscow prioritization table based on this meeting's discussion. align items to the three modules (standardization, PIM, webshop)
- discuss and propose standard units to use in the webshop (e.g., liter, milliliter, centiliter)
- Schedule the next meeting (ON-SITE) **Tuesday, October 13th at 1:00 PM**

Key tips / feedbacks:

- Tech Data IDs can be used to link tables across datasets, the relational structure is intentional

- Fritz clarified the actual current workflow again:
  Suppliers send data in varying formats and structures
  Data is first uploaded to a pre-processing system (not directly to PIM)
  Some guy manually maps supplier categories and selects appropriate data
  Mapped/structured data is then pushed into the PIM, then to the webshop

- About the Moscow table: Fritz strongly recommended to use concrete examples (Coca-Cola, printer paper) rather than abstract/academic language

- Fritz said that as the project progresses and alignment improves, meetings can shift to online

Key flaw clarified: units are not yet standardized across suppliers — e.g., Manutan uses milliliters, Rexel uses liters, ISERO uses centiliters — making webshop product comparisons unreliable

- Fritz confirmed the SOL diagram aligns well with how the process should work, the team just needs to add the **unit standardization step** between structured product data and PIM

- Fritz said that the **ordering layer** as a potential scope consideration: supplier order conditions (for exp Rexel only accepts orders in multiples of 500 pages) must be considered if ordering is in scope

Keep in mind next time:
- send all documents to be discussed **before** of each meeting, attached to the agenda
