When you say, “manually standardize all products” what specifically do you want to standardize?

What is the standard that you adhere to?

Do you have examples of the different formats used by your suppliers?

Will you be providing a frontend for is to work in or is that not required?

When saying “responding to hot items in the news” do you want us to regularly update the model with actual news articles?

- If so is it okay to use an external generative AI model (chatgpt, claude etc) for this task?

How would you prioritize the issues within this assignment?
