Business Requirements	
1	BestDeal needs consistent product quantities across different supplier feeds.
2	BestDeal needs standardized units of measurement to support reliable product comparisons.
3	BestDeal needs to identify inconsistencies, missing values, and unusual formats in supplier product data.

User Requirement		MoSCoW	Type
1	As a BestDeal employee, I want product quantities to be standardized across suppliers so that I can compare equivalent products consistently.	Must	Functional
2	As a BestDeal employee, I want units of measurement to be standardized so that product information from different suppliers is consistent.	Must	Functional
3	As a BestDeal employee, I want to review the results of automatic data cleaning so that I can check whether missing or inconsistent quantity and unit information has been handled correctly.	Must	Functional
4	As a BestDeal employee, I want to preserve original supplier ordering information so that products can still be ordered according to supplier requirements.	Must	Functional
5	As a BestDeal employee, I want to compare equivalent products and their prices so that I can identify differences between suppliers.	Must	Functional
6	As a BestDeal employee, I want to identify equivalent products using EAN so that I can match products from different suppliers.	Should	Functional
7	As a BestDeal employee, I want to review and approve the final standardized data before sending it to the BestDeal PIM system so that I can ensure its correctness.	Must	Functional
8	As a BestDeal employee, I want to manually correct incorrect quantities or units so that I can fix errors before approving the data.	Should	Functional

AI System Requirments		MoSCoW	Type
1	The system must automatically standardize product quantities across different supplier feeds.	Must	Functional
2	The system must automatically standardize units of measurement to ensure consistent product information across suppliers.	Must	Functional
3	The system must identify missing, inconsistent, or unusually formatted quantity and unit information in supplier data.	Must	Functional
4	The system must preserve original supplier-specific ordering information during the standardization process.	Must	Functional
5	The system must produce standardized quantity and unit information that supports accurate comparison of equivalent products and their prices.	Must	Functional
6	The system must display the final cleaned and standardized product data to a BestDeal employee for review before it is transferred to the PIM system.	Should	Functional
7	The system should allow a BestDeal employee to approve the standardized product data after reviewing it.	Must	Functional
8	The system must make the standardized product data available for transfer to the BestDeal PIM system after the employee's final review.	Should	Functional
9	The system should use EAN to help identify equivalent products across different suppliers.	Should	Functional
10	The system should allow a BestDeal employee to manually correct incorrect standardized quantities or units before the data is transferred to the PIM system.	Could	Functional
11	The system could flag records that may require additional manual review.
