# MoSCoW Prioritization

### Must Have

- Standardize product quantities across different suppliers.
- Standardize units of measurement.
- Identify inconsistencies, missing values, and unusual formats.
- Preserve original supplier ordering information in the backend.
- Enable more accurate comparison of equivalent products and prices.
- Keep the project focused on quantities and units.

### Should Have

- Use EAN to identify equivalent products.
- Support common unit conversions and supplier-specific formats.
- Investigate and compare rule-based methods, data processing, and AI/ML.
- Evaluate the accuracy and usefulness of the prototype.

### Could Have

- Use anomaly detection to identify unusual values.
- Explore a hybrid approach combining rules and AI/ML.
- Flag records that may require manual review.

### Won't Have

- Standardize product descriptions or images.
- Cross-selling and upselling.
- Seasonal product recommendations.
- Standardize product information outside quantities and units.
